```

Quotes to Scrape

```
quotes = soup.find_all('span', class_='text')
authors = soup.find_all('small', class_='author')
```

```
for q, a in zip(quotes[:5], authors[:5]):
    print(q.text, "-", a.text)
```

"The world as we have created it is a process of our thinking. It cannot be changed by our actions, but only by our thoughts."
 "It is our choices, Harry, that show what we truly are, far more than our abilities."
 "There are only two ways to live your life. One is as though nothing is a miracle. The other is as though everything is a miracle."
 "The person, be it gentleman or lady, who has not pleasure in a good novel, must surely be without imagination."
 "Imperfection is beauty, madness is genius and it's better to be absolutely ridiculous than to be sane, polite, a 'famous' person, popular, and well-to-do."

```
data = {
    'Quote': [q.text for q in quotes],
    'Author': [a.text for a in authors]
}
```

```
quotes_df = pd.DataFrame(data)
quotes_df.head()
```

Task 1: Web Scraping Summary

I used the `requests` library to fetch the HTML of `quotes.toscrape.com`, then used BeautifulSoup to parse the page and extract quote text and author names using their HTML tag and class names (`span.text` and `small.author`). The extracted data was structured into a pandas DataFrame and exported as a CSV file (`quotes_dataset.csv`), creating a clean, structured dataset from raw webpage content.
